## Persistent Flagging

My analysis, as previously noted, applied compliance metrics to each record independently. Every month, metrics were re-applied so that an entity (i.e., physician, pharmacy) that was flagged in the previous month was not flagged by default in the following month, which gave the manufacturer credit as if diligence was performed on that entity in that month. Other experts<sup>1</sup> maintained a flag on an entity once that entity was first flagged for prescriptions/purchases by drug code based on the assumption that no due diligence had been performed by defendants. This addendum implements a similar methodology, such that every subsequent transaction of that drug type would also be flagged because the labeler had an unfulfilled obligation to detect and investigate the initial flagged transaction.

### Manufacturer to Prescriber: IQVIA Persistent Flagging

Compliance metrics were applied by drug (e.g., oxycodone, hydrocodone, codeine), meaning the initial date for a physician being flagged for hydrocodone may not necessarily be the initial date for the physician being flagged for codeine. After the first defendant labeler flagged a prescriber for a given drug, it was assumed that all prescriptions for that drug for any defendant labeler would also be flagged. Included below are summary tables describing flagging results in Summit and Cuyahoga Counties, as well as tables containing the percentage of example physicians' prescribing months that were flagged by the compliance metrics.

**Table 1 Flagging Results by Type of Compliance Metric (IQVIA; 1997-2006, 2008-2017 Summit, Cuyahoga)**

*Flagging totals are of Defendant Labelers and percentages are based on the counties' total prescriptions. The table is sorted by percent of county physicians.*

Metric	Defendant Labeler Flagged Physicians	% of Counties' Physicians	Defendant Labeler Flagged Prescriptions	% of Counties' Prescriptions	Defendant Labeler Flagged Dosage Units	% of Counties' Dosage Units	Defendant Labeler Flagged MMEs	% of Counties' MMEs
Common Sense	13,375	75.2	19,422,814	79.3	1,021,968,665	76.4	11,752,032,310	77.2

Purdue	96.9	77.0	100	100	100
Teva	96.9	75.5	97.4	95.8	97.4

### Manufacturer to Pharmacy: Persistent Flagging

Compliance metrics were applied per drug and labeler, assuming that labelers only had access to chargeback data for their own products. This meant that within a given labeler's chargeback data, a pharmacy or practitioner could have been initially flagged on different dates for different drugs. Included below are summary tables describing flagging results in Summit and Cuyahoga Counties, as well as tables containing the percentage of example pharmacies' total chargeback months that were flagged by the compliance metrics.

Table 11 Flagged Chargeback Transactions by Compliance Metric: Persistent Flagging  
(Chargebacks – Defendant Labelers; Varies Between 1998-2018 Summit, Cuyahoga)

Metric Type	Flagged Buyers	% of All Buyers	Flagged Chargebacks	% of All Chargebacks	Flagged Dosage Units	% of All Dosage Units	Total Months Flagged
Double National Average	817	63.4	795,977	74.4	413,362,511	84.0	250
Triple National Average	604	46.9	587,678	54.9	329,383,272	66.9	249

## Twelve-Month Trailing National Average

As noted in my analysis, I calculated a national average compliance metric on a monthly basis. This is an approach as an addition to other experts' approaches to calculating national averages. Specifically, the McCann<sup>2</sup> report calculates a rolling monthly national average over the preceding 12 months.

### Manufacturer to Prescriber: Twelve-Month Trailing National Average

Compliance metrics were applied by drug (e.g., oxycodone, hydrocodone, codeine) and prescriber specialty (e.g., pain management, anesthesiology) or business activity (e.g., chain pharmacy, retail pharmacy). Results of applying the compliance metrics are displayed using two methods: applying the metric independently to each month and persisting the flag after the first defendant labeler flagged a prescriber for a given drug. The former did not address whether due-diligence was performed on a doctor that triggered the flag. The latter assumed that no due diligence was performed by defendants and therefore all records for a given prescriber would be flagged in perpetuity. Included below are summary tables describing flagging results in Summit and Cuyahoga Counties, as well as tables containing the percentage of example physicians' prescribing months that were flagged by the compliance metrics.

Table 22 Flagging Results by Type of Compliance Metric  
(IQVIA; 1997-2006, 2008-2017 Summit, Cuyahoga)

*Flagging totals are of Defendant Labelers and percentages are based on the counties' total prescriptions. The table is sorted by percent of county physicians.*

Metric	Defendant Labeler Flagged Physicians	% of Counties' Physicians	Defendant Labeler Flagged Prescriptions	% of Counties' Prescriptions	Defendant Labeler Flagged Dosage Units	% of Counties' Dosage Units	Defendant Labeler Flagged MMEs	% of Counties' MMEs
12 Month Trailing Double National Average	5,028	28.3	10,566,961	43.1	640,691,301	47.9	8,335,244,239	54.8

### Manufacturer to Pharmacy: Trailing 12 Month Trailing National Average

Compliance metrics were applied per drug, labeler, and business activity (e.g., retail pharmacy, chain pharmacy) assuming labelers only had access to chargeback data for their own products. This meant that within a given labeler's chargeback data, a pharmacy or practitioner could have been initially flagged on different dates for different drugs. Included below are summary tables describing flagging results in Summit and Cuyahoga Counties, as well as tables containing the percentage of example pharmacies' total chargeback months that were flagged by the compliance metrics.

Table 32 Flagged Chargeback Transactions by Compliance Metric (Chargebacks – Defendant Labelers; Varies Between 1998-2018 Summit, Cuyahoga)

Metric Type	Flagged Buyers	% of All Buyers	Flagged Chargebacks	% of All Chargebacks	Flagged Dosage Units	% of All Dosage Units
12 Month Trailing Double National Average	682	52.9	585,624	54.7	334,128,578	67.9
12 Month Trailing Triple National Average	516	40.0	392,967	36.7	248,293,619	50.5
Persistent 12 Month Trailing Double National Average	682	52.9	709,194	66.24	379,137,207	77.1
Persistent 12 Month Trailing Triple National Average	516	40.0	522,676	48.82	302,079,912	61.4
Any Metric	682	52.9	709,194	66.2	379,137,207	77.1

## Purdue Compliance Metrics

I received documentation for several Purdue Pharma compliance metrics for which I had sufficient data and descriptions that were new to me in the days immediately prior to filing my initial analysis on April 15, 2019. I am producing this addendum showing the results of applying those compliance metrics.

### Manufacturer to Prescriber: Purdue Compliance Metrics

I was made aware of two compliance metrics for which I had sufficient data and descriptions for implementation to the IQVIA data. The two metrics are described below.

#### 50% Six-Month Increase<sup>3</sup>

A prescriber whose average monthly prescription total for the current six-month period increased by more than 50% as compared to the average monthly prescription total for the preceding six-month period was flagged. This metric was included in Purdue's internal SOM program with the intended use of performing compliance on IQVIA Xponent® data.

#### 75% High Dosage<sup>4</sup>

Any prescriber who was found to prescribe a "large concentration of particular strength prescriptions" was flagged. An entity who wrote more than 75% of prescriptions for OxyContin 40mg and/or OxyContin 80mg within a calendar month was subject to this compliance metric. This guidance was included in Purdue's internal SOM program with the intended use of performing compliance on IQVIA Xponent® data. As such, this compliance metric was only applied to physicians and was not considered applicable to 867 or ARCOS data. Because this metric was developed by Purdue, who manufactured nearly all oxycodone under the brand name of OxyContin, the trade names of OxyContin 40mg and OxyContin 80mg are considered synonymous with the drug and dosage types of oxycodone 40mg and oxycodone 80mg for the purpose of applying this metric to prescriptions written by physicians that were filled by other manufacturers. Prescribers are therefore flagged based on their prescriptions of oxycodone 40mg and oxycodone 80mg as found in the IQVIA Xponent® data.

---

#### Manufacturer to Pharmacy: Purdue Compliance Metrics

I was made aware of three additional Purdue compliance metrics for which I had sufficient data and descriptions for implementation. The three metrics are described below.

##### State Average Overall Volume<sup>5</sup>

Any purchaser whose total transactions of a particular drug type was greater than one standard deviation above the statewide per-purchaser average for the same drug type is flagged. Purchasers are grouped into cohorts by business activity, so statewide average per-purchaser averages are calculated separately for chain pharmacies, retail pharmacies and practitioners. Total transactions are measured as the total count of 867 and ARCOS transaction records, sum of dosage units, and the sum of MMEs. Metrics are calculated over three different time periods – three months, six months, and twelve months. According to Purdue's internal SOM program, these metrics were applied to a "product family," which I interpret to mean drug type (i.e., oxycodone).

##### State Average Percent of Volume<sup>6</sup>

Any purchaser whose percentage share of the state's total volume of a particular drug type was greater than one standard deviation above the statewide per-purchaser average for the same drug type is flagged. Purchasers are grouped into cohorts by business activity, so statewide average per-purchaser averages are calculated separately for chain pharmacies, retail pharmacies and practitioners. Volume is measured as the number of 867 and ARCOS transactions, the sum of dosage units and the sum of MMEs. Metrics are calculated over three different time periods – 3 months, 6 months, and 12 months. According to Purdue's internal SOM program, these metrics were applied to a "product family," which I interpret to be a specific drug type (i.e., oxycodone).

##### State Average Highest Dosage<sup>7</sup>

Any pharmacy whose proportion of the highest dosage available per drug type out of all opioid volume is more than one standard deviation above the statewide per-purchaser average was flagged. Total volume was measured as the sum of dosage units and the sum of MMEs and calculated over three different time periods – 3 months, 6 months, and 12 months. According to Purdue's internal SOM program, these metrics were applied to a "product family," which I interpreted to be a specific drug type (i.e., oxycodone).
